

Mast climbing work platform

Option / Add-On

All Reach Extension

Scanclimber's All Reach Extension (ARE) provides access from Mast Climbing Work Platforms (MCWP) into complex structures.

ARE is an out-reaching mast climber extension that can move along the platform, glide in and out from the main platform and can slew 90 degrees. All Reach Extension is designed for places where you have to reach uneven facades and the most complex structures.

General

THE SCANCLIMBER ALL REACH EXTENSION (ARE) is a versatile expansion for standard mast climbing work platforms, that helps you access places otherwise unreachable.

ARE IS LIKE A 'FREELY' MOVING DIAGONAL PLATFORM on the main platform, that not only slides in and out more than 5 meters, but also slides along the platform and slews by 90 degrees.

IT CONVERTS THE STANDARD MCWP into a dynamically-aligning, high-reach access machine that makes it easier and quicker to perform work on very complex or uneven surfaces.

All Reach Extension reach

ALL REACH EXTENSION can slide 5.5 meters outwards from the main platform edge. It can also slide along the main platform's length. Also, while reaching out, the ARE can be slewed by 90 degrees.

Advantages of ARE

ARE OFFERS SEVERAL ADVANTAGES for all users of Scanclimber MCWPs since expansion is available for Scanclimber's MCWP models. Once you have an ARE, it can be installed on any MCWPs you have.

- ability to adjust the platform position, reach and angle steplessly whilst in the air and in complete safety
- outside reach up to 5.5 meters from the main platform edge
- the narrow extension can slew $\pm 45^\circ$
- access inside the structure
- provides high reach access on buildings/structures with pillars, masts cavities, cone shapes and offsets
- robust design, materials and manufacture allows freedom of use in demanding/harsh conditions.

Compatibility

THE ALL REACH EXTENSION fits into the Scanclimber MCWP product range. It is fully compatible with existing SC5000, SC6000 and SC8000 products. It offers new application and use opportunities to existing customers, who can use our products in ways that are both versatile and productive.

Dimensions and payload

ARE CAN CARRY a payload of 2 persons with tools = $2 \times 120 \text{ kg} = 240 \text{ kg}$. It is 700 mm wide and 7 meters long.

Scanclimber is a global leader in the design and manufacture of vertical access solutions for construction, renovation, and demolition projects globally. The company provides high quality mast climbing work platforms and custom vertical access solutions built on advanced rack and pinion technology. With a commitment to quality and innovation, Scanclimber continues to set new standards in the industry. Scanclimber is part of Alimak Group, which is headquartered in Stockholm, Sweden.
